

GTR Expense Pipeline

From a swipe of the Washington Trust debit card to job-cost visibility in ProBuild — who touches what, where the money data lives, and what runs by itself. Goal: answer "are we profitable, is cash flow good" daily.

Updated July 31, 2026 · Every stage below is **live and verified end-to-end** (test receipt → QuickBooks purchase → ProBuild job cost, receipt attached the whole way).

 →  →  →  →  receipt → books → job costs, hands-free

1 · PURCHASE

Money leaves the bank

Nearly all purchases hit the **Washington Trust debit cards** (CJ ...8516, Richard ...6098), plus checks, Venmo and Cash App payments to helpers. Keep the receipt — paper, email, or photo.

2 · RECEIPTS LAND IN GOOGLE DRIVE

One folder per job — named exactly like the ProBuild project

Email intake (automatic)

Receipt emails to rlord@ (Lowe's, Home Depot, Amazon...) are pulled every few minutes and filed into "New Receipts & Checks". Body-only e-receipts are saved as PDF — never as a text file.

Manual drop

Anyone can drop a photo or PDF into the job's folder. Overhead with no job goes in

Shop

. Coming: snap it in the ProBuild mobile app from the truck.

- **Folders make themselves:** when a project goes In Progress in ProBuild, its intake folder appears in Drive automatically (checked daily). Never hand-name a folder — if one doesn't match a project, Justin gets a drift alert and receipts in it fall back to the slow path.
- Folders starting with  are archives — the bot ignores them.

3 · AI READS THE RECEIPT (EVERY 10 MIN, GEMINI)

✦ **Named, deduped, and understood — including the tax line**

- Extracts vendor, date, invoice #, the **final total** (after discounts and coupons — the number that matches the bank charge), and the **sales tax** shown on the receipt.
- File renamed `Project_Date_Vendor_Invoice_$Amount` and archived by month in Drive — **the raw original is always kept** as the permanent backup.
- Duplicates quarantined; unreadable items parked in *_Needs Review* with an email alert. Nothing is ever silently lost.

4 · THE PURCHASE IS CREATED IN QUICKBOOKS (API)

✦ → **qb Booked, job-coded, tax split, receipt attached — ready to match**

- ProBuild creates the finalized QBO purchase: paid from **Washington Trust Bank**, vendor auto-created, expense line coded to the **customer/job**, receipt PDF attached.
- **Sales tax gets its own line** to the "Reimbursable Sales Tax Paid" account (see the reseller-permit box below). The lines always rebuild the receipt total to the penny.
- Duplicate-proof: keyed to the Drive file, so retries can never book the same receipt twice.
- **Fallback:** Shop/overhead receipts, oversized files, or anything the system can't confidently code goes to the QBO receipts inbox by email instead — Marge books those by hand, same as the old days.

5 · QUICKBOOKS — SOURCE OF RECORD

qb Marge reviews · Vanessa matches

Marge reviews each auto-created purchase (right job? right vendor?) instead of typing it from scratch. **Vanessa** matches the bank feed — the purchase amount equals the card charge, so matches line up on their own. QuickBooks owns the books; ProBuild never edits money that lives here.

6 · QBO → PROBUILD SYNC (EVERY 4 HOURS, AUTOMATIC)

qb → G Finalized expenses flow into ProBuild job costs

- **Job match:** the QBO customer maps to exactly one *In Progress* ProBuild project. It never guesses — ambiguity is a visible skip, not a wrong booking.
- **Overhead triage:** purchases with no customer import into **Shop** tagged [Overhead]. Assign the real customer in QBO later and the expense moves itself on the next sync. Owner draws are excluded.
- **Corrections flow through:** voids, deletions, and refunds in QBO zero out the ProBuild copy automatically.
- **Receipts come along:** the attachment is copied into ProBuild's own storage — viewable in ProBuild with **no QuickBooks login**. Missing one? Upload it with the paperclip button.

7 · PROBUILD — WHERE YOU LOOK

G Job costing and company-wide visibility

Per project

Project → Time & Expenses → Expenses tab, and the Financial Overview (cash flow, margin). Imported rows say "Finalized in QuickBooks" and are read-only.

Company-wide

Reports → Company Financials:

profitability and cash flow across every job plus overhead, with charts and date/month filters. Manager → Bookkeeper Review Queue is the audit trail of every import.

Why sales tax is split out — the reseller permit

GTR holds a reseller's permit. When a vendor doesn't have our certificate on file, we pay sales tax we can later reclaim from the state. Every receipt now books as two lines — the pre-tax cost to the job, and the tax to **"Reimbursable Sales Tax Paid"**. Filing time is one report on that account: the total is the claim. If a receipt's tax line can't be read, the purchase books as a single line like before — a bad tax read never blocks a booking.

WHAT RUNS BY ITSELF

JOB	HOW OFTEN	WHAT IT DOES
Receipt email pull	Every few minutes	Saves receipt emails from rlord@ into the intake folders (PDF, never .txt)
Receipt scan + QBO booking	Every 10 minutes	Reads new receipts with AI, archives the original, creates the QuickBooks purchase (or emails the fallback)
Folder reconciler	Daily	Creates intake folders for new In-Progress projects; emails Justin when a folder matches no project
QBO → ProBuild sync	Every 4 hours on	Imports finalized purchases into job costs, copies receipts over, applies voids/edits/moves

WHO DOES WHAT NOW

PERSON	THEIR PART
Field crew / anyone	Get the receipt into the job's Drive folder (email receipts go by themselves)
Marge	Review auto-created purchases in QBO; hand-book the email-fallback ones; watch _Needs Review alerts
Vanessa	Match the bank feed; run the sales-tax account report at state-filing time
Richard / CJ / Justin	Read the numbers: project Financial Overview and Reports → Company Financials
The system	Everything between the receipt and the report

WHAT'S NEXT ON THE ROADMAP

PIECE	WHAT IT ADDS
Mobile field capture	Crew photographs the paper receipt in the ProBuild app, on the job site — it enters this same pipeline with the job pre-selected
Line-item category splitting	AI splits big receipts (lumber vs. plumbing vs. electrical) into coded lines, not just one
Vendor name cleanup	One canonical vendor list so "Lowes" and "Lowe's Home Improvement" stop creating near-duplicates in QBO
